Work History

Catchpoint - March 2022 to Present

Technical Customer Success Manager

- Assume full accountability of the customer journey, from On boarding through Renewal
- Conduct regular business reviews and monitor account health to maximize account retention
- Map Catchpoint's value to client's organization, goals, and challenges to generate growth
- Drive engagement and adoption of Catchpoint's platform
- Transform clients into partners, developing champions and obtaining executive alignment
- Evangelize success outside of the platform by promoting success in client's craft and careers
- Be a customer advocate while capturing customer feedback for Product and Marketing
- Partner closely with Catchpoint Sales, Support and other Technical teams to ensure an exceptional customer experience

Fuze - November 2017 to Present

Technical Support Manager, Network and Platform

- Identify, develop, and implement service improvements, resulting in measurable customer satisfaction improvements
- Ability to effectively operate in very dynamic and sometimes ambiguous situations
- Ability to logically break down and prioritize complex (often technical) problems to enable resolution in an objective manner
- Review cases to ensure expectations are exceeded
- Constantly assess and align resources to the needs of the business and customer
- Proactively communicate with internal and external customers
- Demonstrate passion for customer satisfaction and ignite that passion in others
- Introduce methods you know will improve the way your team operates
- Identify ways to increase efficiencies
- Own the processes you put in place and take pride in helping develop company communication
- Oversee the management of tickets within the Network Support Engineering team
- Work to resolve technical network-related issues as an individual or utilizing high level technical resources
- Participate in call center environment for network-related issues escalations, internally and externally
- Participate in after-hours On-call rotation

Fuze formally ThinkingPhones - February 2016 to October 2017

Senior Critical Situation Manager

As a member of the Global Center of Excellence Organization, as the Senior Critical Situation Manager, I manage the most urgent customer problems involving Fuze products and services, am the communication focal point for the customer, and I oversee all resolution efforts from the initial problem identification to post-mortem analysis. I also act as a customer advocate to help drive improvements across various internal organizations.

- Own and manage critical situations through completion
- Manage all Internal and External Communication
- Identify and assess impact and urgency of each situation, develop plan of action
- Act as single point of contact (SPOC) for internal and external stakeholders
- Leverage internal resources to drive critical issues to successful resolution
- Build relationships with internal Teams and the customer
- Document events, conversations, solutions
- Create case studies
- Define process and escalation points for critical customer situations
- Establish and develop key relationships within the Fuze global organization to align and leverage global customer support initiatives
- Drive alignment of support processes within customer care center of excellence
- Lead cross-departmental process improvement to maximize customer retention and revenue
- Employ practical experience for managing customer conflict
- Foster collaboration within a cross-functional environment

ThinkingPhones - May 2015 to January 2016

Senior Level Network Support Engineer

- Work directly with customers' IT and Network personnel through phone, email, and case management system to troubleshoot and resolve customer reported network issues
- Configure and support Routers, Switches, Firewalls including but not limited to Adtran, Cisco, Juniper and SonicWall
- Restore, recover, or alter configurations, logical or physical, to maintain service integrity
- Respond proactively and appropriately to client monitoring alarms
- Manage multiple issues in parallel, taking responsibility for meeting SLA and updating customers
- Proactively suggest and implement process improvements
- Configure and support T1's, setting up QoS, separating voice endpoints on their own VLAN, applying custom inbound / outbound rules to the firewall, etc
- Configure and support DIDs, Number Portability, TDM circuits, Data access DSL/Cable/T1/Metro Ethernet
- Configure and support OS - Linux (and / or other Unix and command line VM
- Network analysis fundamentals and troubleshooting skills
- Communicate verbally and in writing with customers in a professional and friendly manner
- Network troubleshooting of SaaS based architectures including network fundamentals (OSI Model, TCP/IP, Ethernet, routers, switches, firewalls) and any hands-on experience with routers / firewalls
- Packet capture analysis using ethereal/Wireshark or equivalent
